

**J. Sargeant Reynolds Community College
Course Content Summary**

Course Prefix and Number: EGR 245

Credits: 3

Course Title: Engineering Mechanics-Dynamics

Course Description:

Presents approach to kinematics of particles in linear and curvilinear motion. Includes kinematics of rigid bodies in plane motion. Teaches Newton's second law, work-energy and power, impulse and momentum, and problem solving using computers. Lecture 3 hours per week.

General Course Purpose

Engineering Mechanics course for AS Engineering majors.

Course Prerequisites:

EGR 140

Course Objectives

Upon completing the course, the student will be able to:

- a. Solve problems with various forms of motion.
- b. Solve problems using the basic laws of force and motion.
- c. Solve problems using the basic laws of energy and momentum.
- d. Solve problems using the basic laws of impulse and momentum.

Major Topics to be Included

- a. Linear motion (1 dimension)
- b. Curved motion (2 dimensions)
- c. Rotational motion
- d. General plane motion
- e. Relative motion
- f. Force and acceleration
- g. Newton's second law
- h. Moments and angular acceleration
- i. Work and energy
- j. Conservation of energy
- k. Impulse and momentum
- l. Conservation of momentum
- m. Motion in space

Effective Date of Course Content Summary: August 2008
